**An Overview of Special Education Transportation:
A Primer for Parents and Educators
was produced in partnership among the following:**

LRP Publications (website lrp.com), of Palm Beach Gardens, Florida, is the national leader in special education case reporters, newsletters, pamphlets, books, tapes, videos and more. LRP's hallmark publications include the Individuals with Disabilities Education Law Report® and The Special Educator®. On the Internet, LRP's Special Ed Connection Web site (specialedconnection.com) is a one-stop source for news, practical advice, best practices, tips, case decisions, chat rooms, e-mail bulletins and much more. LRP (lrp.com) also provides top-quality training and educational development seminars, conferences and symposiums through its Conference Division, including the National Institute on Legal Issues of Educating Individuals with Disabilities, attended by thousands of special education directors, administrators, school psychologists, attorneys and others each year.

The Mountain Plains Regional Resource Center (MPRRC) at Utah State University is a U.S. Department of Education, Office of Special Education funded project. The MPRRC provides technical assistance in special education to 10 States and the Bureau of Indian Affairs.

The Parent Alliance is funded by the U.S. Department of Education under IDEA. There are approximately 100 parent centers in the United States that provide technical assistance to families of children with disabilities.

Author

Steven E. Lake, Esq. is the Editorial Director of Education Legal Products at LRP Publications, a group that includes the Individuals with Disabilities Education Law Report®, Early Childhood Law and Policy Reporter and Special Education Law Monthly. In addition to recording The Special Educator® on Audio, a monthly audio series summarizing important special education decisions, he is author of The Top 10 IEP Errors: How to Avoid Them, How to Fix Them; Separating Church and State: The Challenges of Special Education in Parochial Schools; IEP Procedural Errors: Lessons Learned, Mistakes to Avoid; and Alternative Schools: Legal Guidance for Serving Special Education Students. Mr. Lake has a B.A. from the University of Connecticut and a J.D. from California Western School of Law, where he served on the editorial board of the Law Review. He is admitted to the California and Massachusetts bars.

An Overview of Special Education Transportation

Steven E. Lake, Esq.

Introduction

Transportation is one of the many important services that school districts may have to provide as part of the bundle of special education and related services required for students with disabilities. School districts must ensure they are in compliance with a trio of federal laws: the Individuals with Disabilities Education Act (IDEA), Section 504 of the Rehabilitation Act of 1973 (Section 504), and the Americans with Disabilities Act (ADA). In addition, most states have laws imposing additional requirements regarding student transportation, e.g., maximum time allowed on a bus per day.

These guidelines are intended to provide an overview of the federal laws as well as case law governing the provision of transportation to students with disabilities, and an exposure to the main issues impacting such services. A survey of state laws is unfortunately beyond the scope of this document.

Readers should avoid over-generalizing the applicability of a referenced published decision to a particular transportation issue that they may be facing. Though a published opinion may carry precedential weight for a particular factual scenario, different facts can, and usually do, lead to different legal results. Please consult competent legal counsel for advice about the impact or effect of any transportation decision referenced in this publication.

The full text of the judicial and administrative decisions referenced in this pamphlet can be found in LRP Publications' *Individuals with Disabilities Education Law Report*[®] (IDELR) and *Special Ed Connection* Web site.

I. Laws governing the transportation of students with disabilities

The IDEA, at 20 U.S.C. § 1401(a)(22), explains that transportation is a “related service” for students who are identified with a disability under that law. The law clarifies that:

The term “related services” means *transportation*, and such developmental, corrective, and other supportive services (including

speech-language pathology and audiology services, psychological services, physical and occupational therapy, recreation, including therapeutic recreation, social work services, counseling services, including rehabilitation counseling, orientation and mobility services, and medical services, except that such medical services shall be for diagnostic and evaluation purposes only) *as may be required to assist a child with a disability to benefit from special education*, and includes the early identification and assessment of disabling conditions in children. (emphasis added)

The IDEA's implementing regulations, at 34 C.F.R. § 300.24(15)(a), further underscore that:

As used in this part, the term related services means *transportation and such developmental, corrective, and other supportive services as are required to assist a child with a disability to benefit from special education*, and includes speech-language pathology and audiology services, psychological services, physical and occupational therapy, recreation, including therapeutic recreation, early identification and assessment of disabilities in children, counseling services, including rehabilitation counseling, orientation and mobility services, and medical services for diagnostic or evaluation purposes. The term also includes school health services, social work services in schools, and parent counseling and training. (emphasis added)

The regulations go on to clarify, at 34 C.F.R. § 300.24(b)(15), that:

Transportation includes—

- (i) Travel to and from school and between schools;
- (ii) Travel in and around school buildings; and
- (iii) Specialized equipment (such as special or adapted buses, lifts, and ramps), if required to provide special transportation for a child with a disability.

Another federal law governing transportation is Section 504 of the Rehabilitation Act of 1973. This law ensures that recipients of federal financial aid do not discriminate against qualified persons on the basis of their disabilities. Below are some of the relevant provisions:

No qualified student shall, on the basis of handicap, be excluded from participation in, be denied the benefits of, or otherwise be subjected to discrimination under any . . . *transportation*, other extracurricular, or other post-secondary education program or activity. (emphasis added).

34 C.F.R. § 104.43.

Nonacademic and extracurricular services and activities may include transportation.

34 C.F.R. § 104.37.

The Americans with Disabilities Act, 42 U.S.C. §§ 12101-12213, can also impact the provision of transportation to students with disabilities. The ADA prohibits discrimination against all persons with disabilities, and applies to public agencies, including schools and school-age children. The ADA generally requires that there cannot be architectural barriers in and around buildings that would prevent them from being accessible to persons with disabilities.

Helping fill in the gaps, elaborate on, clarify, and/or add to our understanding of transportation issues and requirements are:

- Rulings from the Department of Education's Office of Special Education Programs (OSEP).
- Rulings from the Department of Education's Office for Civil Rights (OCR) (which has jurisdiction over matters relating to Section 504 and the Americans with Disabilities Act).
- State due process hearing decisions.
- Federal court decisions.
- State laws governing student transportation.

II. Is there an entitlement to transportation?

Generally, if a school district provides transportation to its general education population, then it must provide transportation for special education students to any program to which it assigns those children. In essence, a school district can't discriminate against students with disabilities by not providing appropriate transportation services.

However, if a school district is not in the practice of providing transportation to the general education population, then it must decide on an individualized basis whether or not a special education student requires transportation as a related service in order to receive a free appropriate public education (FAPE). If a student with a disability requires transportation as a related service, the school district must provide it. This is true even if the district does not otherwise offer transportation to nondisabled students.

In all cases, the school district's obligation under the IDEA is not dependent upon whether nondisabled children receive the same type of services. Some related services are never needed by, or offered to, nondisabled students.

School districts should ensure they have considered the IDEA's least restrictive environment (LRE) mandate in making transportation decisions. Under the IDEA's regulations, LRE requires each public agency to ensure that: (1) children with disabilities are educated with nondisabled children to the maximum extent appropriate; and that (2) special classes, separate schooling or other removal of children with disabilities from the regular educational environment occurs only when the nature or severity of the disability is such that education in regular classes, with the use of supplementary aids and services, cannot be achieved satisfactorily. 34 C.F.R. § 300.550 (b).

Transportation decisions generally require collaboration and consensus among parents, the student (as appropriate), educators and transportation personnel. Most transportation issues are identified and resolved through the individualized education program (IEP) process. The IEP should carefully and fully spell out the transportation that may be required for a student as a related service.

If a student with disability is capable of using the same transportation services as nondisabled students, the IDEA does not require transportation to be listed as a related service in the IEP. *Letter to Hamilton*, 25 IDELR 520 (OSEP 1996). The Office of Special Education Programs instructed that in cases where a district does not provide transportation to its general population, and parents transport students in return for mileage compensation, the IEP team must determine the district's obligation to provide transportation to students with disabilities on a case-by-case basis. The district must make that determination based upon the relationship between the child's disabilities and the need for a particular related service.

The 8th U.S. Circuit Court of Appeals ruled a school district did not discriminate against a high school student when it refused to provide her with specialized transportation to the school of her choice, under an established intra-district transfer program. *Timothy H. and Brenda H. v. Cedar Rapids Community Sch. Dist.*, 30 IDELR 535 (8th Cir. 1999). Under the transfer program, a student could attend a district school outside the regular attendance area if the parents agreed to assume responsibility for transportation to and from the school. When the student, who had cerebral palsy, spastic quadriplegia, and other severe orthopedic and communication disabilities, wished to participate in the program, the district refused to transport her in the special lift bus.

The 8th Circuit held that the school district had no discriminatory intent when it established the facially-neutral transportation policy for its intra-district transfer program, and that it had not taken any action to deny program access or deny the student FAPE. Assuming an obligation to reasonably accommodate the student existed, the court

reasoned that the demand for special transportation was, in this instance, an undue burden. It said that requiring the school district to spend any amount of money to provide transportation would fundamentally alter the main requirement of its intra-district program. In addition, requiring a school district to establish a special bus route for a student who receives FAPE for reasons unrelated to parental preference was an undue burden.

Note that the 5th U.S. Circuit Court of Appeals has ruled that a school district may also be required to provide transportation beyond the district's geographic boundaries. *Alamo Heights Indep. Sch. Dist. v. State Board of Educ.*, 557 IDELR 315 (5th Cir. 1986) ("Transportation required as a 'related service' under [the IDEA] is not arbitrarily limited by geographic boundaries of a school district so long as it is required for the special circumstances of the handicapped child and is reasonable when all of the facts are considered.")

III. Transportation components

A. Vehicles

The type and size of transportation vehicles are decisions generally left to the district's discretion.

- Vehicles can include vans, minibuses, private cars.
- Small vehicles, including taxicabs, are not prohibited by the IDEA. In fact, they have been approved in some instances. *Letter to McKaig*, 211 IDELR 161 (OSEP 1980).
- Districts should consider the LRE impact in their choice of vehicles.

B. Specialized equipment

This can include a wide variety of items, including:

- Special or adapted buses.
- Lifts.
- Ramps.
- Special seat restraints.
- Security devices (harnesses, tethers, braces, brackets, restraints, seatbelts, vests).
- Curb-cuts.
- Car seats or other special seats.
- Locks.
- Handrails.
- Walkers.
- Wheelchairs.
- Air-conditioning and other climate control methods, including tinted windows.

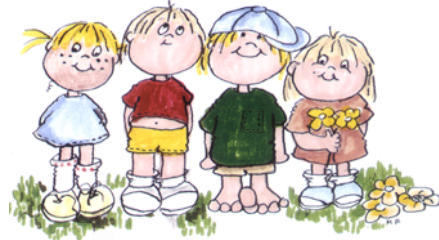

In *San Juan (CA) Unified Sch. Dist.*, 37 IDELR 129 (OCR 2002), a California district informed the parent at an IEP meeting it believed the student needed to wear a specific

neck brace when being transported to school. Since the brace was not immediately available, the district offered home and hospital instruction. The parent refused those services because she did not believe the student required the brace and filed a complaint with the Office for Civil Rights. The child subsequently missed 11 days of school that month. To resolve whether any replacement services were necessary as a result of the missed school days, the district and parent agreed to convene another IEP meeting.

C. Personnel to assist students

Personnel may include:

- Aides
- Escorts
- Monitors

If personalized services are needed in the classroom, parents may have grounds to assert that they will also be needed on their child's bus. However, these determinations must be made on an individualized basis, depending on the needs of each child. The goal of transportation as a related service is primarily to provide safe access to education. The goals in the classroom are designed to ensure the child receives appropriate educational benefit. These different goals may lead to different obligations.

In *Cedar Rapids v. Garret F.*, 29 IDELR 966 (1999) the U.S. Supreme Court required districts to provide medical treatment to medically fragile students (so long as it doesn't need to be provided by a physician), including during the student's transportation.

D. Transportation 'in and around' school buildings

School districts should consider what assistance the student will require once the student leaves the bus in order to access the school building. This can include lifts, ramps, curb cut-outs, elevators, stair tracs, etc. *Maynard Sch. Dist.*, 20 IDELR 394 (SEA AR 1993).

School districts are not required to provide a wheelchair for transportation purposes outside of school, but may be required to provide one while the child is receiving special education. *Letter to Stohrer*, 213 IDELR 209 (OSEP 1989).

IV. If transportation is necessary, how much is required?

Transportation is not only picking up and dropping off a student before and after school — it's also all other components and elements of the educational program. Each school district must determine if a student needs transportation to and from school, and determine what type of vehicle is needed and all services needed to facilitate a safe trip.

An Overview of Special Education Transportation

The specific mode or vehicle is normally left up to the school district's discretion, so long as the decision is consistent with industry standards and applicable federal and state law.

The law doesn't say whether the district's responsibility ends at the bus stop, at the curb of the student's home, or at the door. Generally, those individual determinations are made as part of the child's IEP process. Districts should weigh a number of factors and determine the scope of transportation requirements on an individualized basis.

A. Bus stops vs. home pick-ups

Factors to consider:

- Is the child mobile or nonambulatory?
- What are the effects of child's age and disability on ability to reason and understand potential safety hazards?
- What is the distance traveled (e.g., dangerous, difficult terrain, etc.)
- Is private assistance readily available? (parent, etc.)
- Is public assistance available? (crossing guards, etc.)
- What are child's general supervisory needs?

See, e.g., *Jim Thorpe (PA) Area Sch. Dist.*, 20 IDELR 78 (OCR 1993) ("with respect to the provision of door-to-door transportation, [OCR finds] that the student was treated the same as students from his community who did not have disabilities, in that he was picked up and dropped off at the regular school bus stop for his community. OCR, therefore, concludes that the District and IU #21 are not in violation of the Section 504 regulation.")

B. Curb vs. front door

Under some circumstances, school districts may have to go beyond the curb to pick up a child — it depends on individualized need.

C. Over the threshold and into the home

The general legal consensus is that transportation stops outside the home and doesn't require the district to carry the student across the threshold or come inside a house to pick-up a child.

See, e.g., *Independent Sch. Dist.*, 22 IDELR 598 (SEA MN 1995) (A district's motion to dismiss a request for a due process hearing on the issue of whether a student required transportation from the door of her home to the curb of the street was denied. Transportation issues were required to be made on an individualized basis, and a full hearing on the facts of the case was necessary in order to decide the student's transportation needs.)

D. Unmaintained roads and bad weather

As in all cases, the students' individualized needs are paramount—transportation obligations should be carried out under adverse circumstances as best as possible.

V. Parental issues

In denying the parents' request to compel the district to change transportation contractors to better accommodate their child, an administrative law judge said that while a student's IEP can specify the type of transportation or special equipment required, it cannot mandate the selection of the company that would perform the service. *Manville Bd. of Educ.*, 36 IDELR 177 (SEA NJ 2002). The ALJ noted that districts generally select their bus carriers through a competitive bidding procedure, and they can require that the bidder's vehicles include heaters, air conditioners or windows that open in order to accommodate students with disabilities. In this case, the ALJ stated the parent had the option to offer input to the student's case manager (and through the case manager, to the transportation coordinator and bus driver) on specific information concerning the student, including safety concerns, his mode of communication, and relevant health or behavioral characteristics.

If transportation is a related service, it must be provided to students at no cost to them or their parents. A district cannot make a parent transport their child to school. For example, in *Middleborough Pub. Sch. Dist.*, 33 IDELR 204 (SEA MA 2000) a state review officer ordered the district to arrange for special transportation if the parent was unable or unwilling to continue those services, although noting that it was appropriate for the parent to transport the student to school in the mornings.

Neither can parents demand reimbursement if the school district has offered to provide appropriate transportation and they unilaterally decide to transport the student. For example, in *Maynard Sch. Dist.*, 20 IDELR 394 (SEA AR 1993), an Arkansas school district could not demand that parents of a student in a wheelchair make necessary transportation arrangements. However, if the parents were willing to do so, then the district was obligated to reimburse them.

There is little guidance in the IDEA regulations or administrative guidance concerning parental reimbursement. A parent who transports a child with a disability is entitled to reimbursement, if transportation is identified as a related service and the student's IEP calls for transportation by the parent. Under those circumstances, a school district generally reimburses the parent for transportation costs in accordance with the terms of an applicable financial agreement.

An Overview of Special Education Transportation

A district may also be required to reimburse parents where:

- Transportation is needed to provide FAPE and the district fails to meet its obligations.
- The district doesn't recognize the need for transportation.
- The district makes inadequate provisions for transportation.

For example, in *Yakima Sch. Dist.*, 36 IDELR 289 (SEA WA 2002), an administrative law judge ruled a Washington district's procedural errors affected the parent's opportunity to participate in the IEP process, because it unilaterally decided the student did not qualify for transportation without involving the parent in the discussion. Additionally, its failure to furnish notice resulted in the parent's continued confusion about the parent's legal option to pursue transportation. Despite the FAPE violations, the ALJ denied the parent's claims for reimbursement of private transportation costs. The student did not require a specialized form of transportation as a related services and, therefore, was entitled only to the same type of transportation as her nonresident peers. Evidence established that the only meaningful mode of transportation for nonresident students was a reliance on their parents or other parentally arranged transport, since the district did not offer busing to students living outside its boundaries. The ALJ acknowledged that two hours of driving involved a significant contribution of time and money by the parent. However, that was the burden of all nonresident parents who chose to enroll.

In *Zak L. by Tracy L. v. Cambridge Sch. Comm.*, 30 IDELR 863 (D. Mass. 1999), the parents of a 10-year-old who exhibited violent behavior were entitled to reimbursement from a Massachusetts school department for the cost of special, separate and direct transportation to a school approved in the student's IEP. The school department had previously agreed to reimburse the parents if they made separate transportation arrangements themselves. The school department later offered only van transportation or mileage reimbursement to the parents. A hearing officer ruled that the student should continue to receive separate and direct transportation until the matter could be finally resolved, and that the parents should be reimbursed for any out-of-pocket expenses incurred in providing such transportation. According to that order, the district would conduct a comprehensive transportation evaluation, and after analyzing the results of that evaluation, the student's IEP team was to amend his IEP upon approval by his parents.

In *Hurry v. Jones*, 555 IDELR 543 (1983-84 EHLR 555:543) (1st Cir. 1984), the father of a 160-pound student with spastic quadriplegia and mental retardation needed to transport his son to and from school. Neither his wife nor the van driver was physically able to carry the student down the stairs from his front door to the street. Because the father had to leave for work before the van arrived, he drove his son to school. State law made the school district responsible for transportation from the student's front door, so the father was entitled to reimbursement. The school district proposed to reimburse him for his mileage, but the court required that he also be reimbursed on a reasonable basis for his time and effort. While the court did not establish a specific formula for determining reasonable rates, it made clear that the rates should be related to the market

value of the actual services provided rather than what the parent's time might be worth in the course of performing his or her regular occupation.

VI. Extracurricular and nonacademic activities

If a student's extracurricular program or nonacademic activity is related to the student's IEP goals and objectives, then transportation will generally be required.

Publicly placed private school students possess the same special education rights as other students with disabilities. Therefore, the obligation to provide them equal opportunities to attend extracurricular activities—under both the Individuals with Disabilities Education Act and Section 504—is also identical. The same is true of students who are placed in out-of-district public schools. School districts are therefore required to provide opportunities to participate in extracurricular activities in these other settings to the same extent they are required in the public school system, including any transportation needed to take advantage of this programming. The fact that students are placed in out-of-district public or private schools cannot be used as grounds to deny them late bus service, and consequent opportunities for participation in extracurricular programming they otherwise would be entitled to receive if they attended the system's own schools.

In *LaGrange Highland (IL) Schs.*, 34 IDELR 126 (OCR 2000), the parent's complaint charged that an Illinois district failed to provide a student with disability integration with her regular education peers, after it contracted for bus transportation services from two different vendors. The Office for Civil Rights ruled that the district provided its students with transportation services that were at least as effective as services provided to nondisabled students. Through its contractual arrangements, the district ensured that any student with a disability who required daily transportation services as a part of the student's IEP was provided with those services.

In *Bethpage (NY) Union Free School District* 16 IDELR 1086 (OCR 1990), a New York school district's failure to provide late bus transportation from after-school activities to a 12-year-old with learning disabilities, who was publicly placed in another district, deprived him of an equal opportunity to participate in his school's extracurricular activities.

A Massachusetts student with profound hearing loss and related emotional problems was placed at a school for the deaf and had an educational need to attend extracurricular activities. She was entitled to receive the related service of transportation to enable her to participate in those programs. *In re Kathleen G. and David G.*, 506 IDELR 317 (SEA MA 1984).

Transportation to and from a day treatment program for a student whose IEP called for six months of continuous mental health services was required to be provided by a California district, even when school not in session. *Walnut Valley Unified Sch. Dist.*, 22 IDELR 1169 (SEA CA 1995).

A Mississippi district was *not* required to provide transportation to and from private speech therapy sessions at a private school or in the home, after the parents rejected the district's offer to provide sessions at the district school. *Hinds County (MS) Sch. Dist.*, 20 IDELR 1175 (OCR 1993).

VII. Significant issues

A. Accommodations for specific disabilities

In *Jamestown (PA) Area Sch. Dist.*, 37 IDELR 260 (OCR 2002), a district promised the Office for Civil Rights it would revise its policy and advise its transportation carrier that a student with diabetes must be allowed snacks on the school bus. The district agreed to develop an appropriate Section 504 plan for the student, and to implement a procedure to designate a back-up person to the school nurse for the administration of glucagon. Additionally, the district stated it would send a memorandum to the school bus company requiring it to inform its drivers to permit the student to eat snacks while on the bus.

In other related decisions, OCR has held that when a student with diabetes requires a snack during the day, the district must allow time to obtain the needed food. *Eureka (CA) City Sch.*, 23 IDELR 238 (OCR 1995). A district might also be required to assign an aide to monitor the provision of snacks. *Renton (WA) Sch. Dist.*, 21 IDELR 859 (OCR 1994).

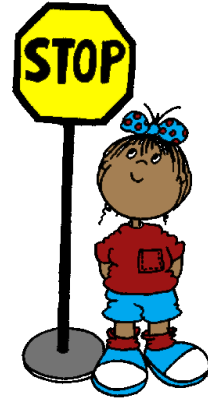

B. Student safety

Districts should review the following issues:

- Is there proper support equipment for each child's specific disability?
- Has there been proper training of personnel who must secure students during transport?
- Has there been proper safety training for all personnel?
- Are students who require it properly secured and/or restrained?
- Is all equipment in good condition and properly inspected?
- Has a crisis management plan been developed?
- Have bus safety rules been distributed to all students and parents?
- Have passenger lists for all routes been maintained and updated?

In *Susavage v. Bucks County Schs. Intermediate Unit No. 22*, 36 IDELR 32 (E.D. Pa. 2002) a student, unable to sit upright independently, was left unsupervised during the 20-minute bus ride to her early intervention program at a private school. The Pennsylvania district knew beforehand that there were three main options available to assist her - put an aide on the bus; get a special car seat; or put her in a harness to keep her in the seat. The

district elected to go with a four-point harness. During the trip to school, she was strangled by the harness and became unconscious. She stayed in a coma for the next nine months and then died. The parents' claims against the intermediate unit included charges that it had knowledge of the danger created by the child's seat-restraint system; failed to train its personnel in the use of the harness; and acted with deliberate indifference. Though the case is still pending, the court refused to dismiss money damages claims under the IDEA, ADA and Section 504. It ruled the parents would have a valid claim under the IDEA if they were able to prove either inadequate transportation services or an improper IEP.

C. Student behavior

The student's IEP and, if applicable, behavioral intervention plan, should address any student behavior that could impact safe operation of bus. The district must consider the safety of both the student and other students.

For example, a Tennessee district's failure to ensure the safety of students in a moderate intervention program from being harassed by students with severe behavioral and emotional disabilities on the bus denied them FAPE. *Metropolitan Nashville-Davidson (TN) Sch. Dist.*, 33 IDELR 135 (2000).

Ongoing bus-driver training is critical. Drivers should have training in behavior management, dealing with a crisis, working together with teachers and the administration, understanding the basics of special education law, and how to document behavioral incidents.

Districts receiving students with behavioral problems need to establish positive recognition for the students who have a safe bus ride with appropriate behavior. Bus drivers should also be trained to write incident reports so the district knows specifically the behavior a student has have engaged in.

A student's behavioral intervention plan should both address both school and bus behavior. Plans should be outlined in the BIP for bus incidents. Ultimately, the school district is responsible for transportation. If a student is not allowed to ride a bus and, for that reason, can't get to school, that may constitute a suspension.

D. Inclusion issues

Both the IDEA and Section 504 require that in providing academic, nonacademic and extracurricular activities and services, including transportation, the district must ensure that each child with a disability participate with nondisabled children in those services and activities *to the maximum extent appropriate to the needs of the child*. 34 CFR § 300.533. This generally means that students with disabilities should ride the general

education bus whenever appropriate. Special buses should be used only when the student cannot access regular transportation services safely.

Unless there is a legitimate nondiscriminatory reason for it, Section 504 and Title II of the ADA generally prohibit separate transportation services for students with disabilities unless such separation is necessary due to a student's disability. For example, in *Fairbanks (AK) North Star Borough Sch. Dist.*, 21 IDELR 956 (OCR 1994), OCR found that an Alaska school district did not discriminate against two students with hearing impairments by transporting them in a special education bus instead of a regular education bus with an aide. There was no available regular education transportation for the students since they were being transported to a special education program outside their local area.

Factors to consider:

- Safety of the student
- Inconvenience and safety of other students riding the bus
- Needs of the student with disability, including whether mainstreaming opportunities are available
- Burden on the district, financially and otherwise.

E. Medical issues

Factors to consider, depending on disability (e.g., medically fragile):

- Is oxygen or other breathing aid required?
- Is air conditioning required?
- Is the length of ride excessive?
- Are restraining devices required and installed?
- Is a medical attendant/nurse required?

In *Pleasant Valley Sch. Dist.*, 37 IDELR 265 (SEA CA 2002), the parents of a student with short-gut syndrome disputed the IEP team's decision to offer their child regular transportation instead of his current door-to-door transportation. The parents cited the student's bouts of vomiting and diarrhea, as well as a concern that his g-tube would become dislodged during the bus trip when medical aid would not be readily available. In further arguing for door-to-door transportation, the parents claimed the student's attention problems made it hazardous for him to travel to and from the bus stop. However, the hearing officer pointed out that any 8-year-old would require parental supervision to meet a school bus. While noting that there were still concerns over the student's multiple medical conditions, the hearing officer determined those concerns would not prevent the child from riding the regular education bus. The district demonstrated it could provide appropriate accommodations by modifying of the student's transportation emergency care plan. The hearing officer directed it to ensure that all appropriate personnel, including the child's bus driver, received training for medical emergencies.

A New York state review officer tossed out an IEP team's recommendation to alter a special transportation requirement in a child's IEP, because the team failed to obtain a supporting medical opinion from the school's doctor. *Board of Educ. of the Smithtown Cent. Sch. Dist.*, 30 IDELR 562 (SEA NY 1999). The student, classified as multiply disabled, attended a special school approximately one hour's distance from his home. Due to the student's health problems, his cardiologist and physician recommended that the bus route accommodate him so that he would be the "last on/first off" the bus. This accommodation was made for five years, until another student with various health problems also required the "last on/first off" accommodation. The IEP team then dropped the "last on/first off" requirement from the student's IEP. The review officer decided that there was sufficient past evidence of the student's condition and that the CSE should have obtained its own medical opinion from the school district physician to support its decision to change the IEP.

F. Contracting for services

Generally, a district may select the method and means to transport children with disabilities and meet its legal obligations. However, the decision to contract/hire out for transportation doesn't not alter the district's obligations that are otherwise due.

In New York, a district contracted with a bus company to provide transportation to carry students to a private school placement. The court rejected the district's contention it was not responsible for the students once they boarded the bus and left school grounds. It said that where a district hires an independent contractor to provide transportation services, it will be liable where the contractor releases a student into a situation that poses a foreseeable risk of harm. *David XX v. St. Catherine's Center for Children*, 31 IDELR 233 (NY Sup. Ct. 1999).

G. Time on bus

The district must consider length of bus ride, proximity of student's home to placement, and overall impact on child. Many states regulate the length of bus rides for students by establishing a maximum amount of travel time. State law also may establish a minimum number of hours for a school day and number of days for a school year. Schools must look first within their own state to determine if such provisions exist; any failure to comply with such provisions may amount to a violation of state law or district policy.

Neither the IDEA nor Section 504 specifically addresses the appropriate length of bus rides for students with disabilities, although Section 504 may provide a remedy for students with disabilities who argue that they are subjected to excessive travel times to

and from school. Lengthy bus rides may be discriminatory and may result in the denial of FAPE. *Letter to Anonymous*, 20 IDELR 1155 (OSEP 1993).

In *Calvert County (MD) Sch. Dist.*, 32 IDELR 42 (OCR 1999), a Maryland district agreed to consider inform the parents of their right to request an equally appropriate placement closer to their homes. It also informed OCR it would recognize its obligation to provide similar transportation to students with and without disabilities, in terms of proximity to home and total time on bus.

Excessive travel time can result in a denial of FAPE. Although some students may require placement at a school or facility that is not located near his home, excessive daily commuting suggests the need for a different placement, possibly a residential placement, and can be deemed to be a denial of FAPE. What constitutes an excessive daily commute varies to a large extent on the student, his disability, overall health condition and norms for the region. Nevertheless, a review of published opinions shows that, generally speaking (and assuming the district is not located in a sparsely populated rural area), a student's daily commute should not greatly exceed one hour either way. See, e.g., *Bonadonna v. Cooperman*, 557 IDELR 178 (1985-86 EHLR 557:178) (D.N.J. 1985); *Covington Community Sch. Corp.*, 18 IDELR 180 (SEA IN 1991); *Kanawho County (WV) Pub. Sch.*, 16 IDELR 450 (16 EHLR 450) (OCR 1987).

H. Shortened school day

A district should not shorten the school day to accommodate bus schedules. See *Palm Beach County (FL) Sch. Dist.*, 31 IDELR 37 (OCR 1998); *Jim Thorpe (PA) Area Sch. Dist.*, 20 IDELR 78; *Lincoln County (NC) Sch. Dist.*, 17 IDELR 1052 (OCR 1991).

Students with disabilities must be given a comparable length of school day and week as nondisabled students, unless there is a compelling, specific reason (e.g., medical).

I. Driver and monitor training

Specific training is required. The district's focus should include:

- Identification and recognition of students by disability.
- Discipline—understanding of school policy/guidelines.
- Sensitivity training—understanding of areas of difficulty for students with disabilities.
- Behavior management intervention strategies.
- Confidentiality requirements.
- Review of procedural safeguards.
- Familiarity with LRE requirements.
